

Alexandra Catherine Montgomery-Whitfield

alexandra.montgomery.whitfield@verylongexampledomainname.engineering | +1 (555) 987-6543

San Francisco Bay Area, California, United States

<https://www.linkedin.com/in/alexandra-catherine-montgomery-whitfield-engineer>

Principal software engineer and engineering leader with 12+ years of experience architecting distributed systems, leading large teams, and shipping consumer and enterprise products at scale. Deep expertise across frontend, backend, infrastructure, and platform engineering. A pragmatic technologist who pairs long-term architectural vision with relentless execution. Reachable at <https://averylongportfoliourlthatdoesnotbreaknicely.example.com/portfolio/work/2024> for a full case-study archive.

TECHNICAL SKILLS

- Languages:** TypeScript, JavaScript, Python, Go, Rust, Java, Kotlin, Ruby, C++, SQL
- Frontend:** React, Next.js, Vue, Svelte, Tailwind CSS, Redux, React Query, Webpack, Vite, Storybook
- Backend:** Node.js, Express, NestJS, GraphQL, gRPC, PostgreSQL, MongoDB, Redis, Kafka, RabbitMQ
- Cloud and DevOps:** AWS, GCP, Azure, Docker, Kubernetes, Terraform, Pulumi, GitHub Actions, Prometheus, Grafana
- Practices:** Distributed Systems Architecture and Design, Event-Driven Microservices, Domain-Driven Design, Observability, Site Reliability Engineering
- Leadership:** Team Building, Mentorship, Technical Strategy, Cross-functional Collaboration, Hiring and Interviewing

PROFESSIONAL EXPERIENCE

Principal Software Engineer and Technical Lead Hyperscale Cloud Infrastructure Corporation Achievement 1: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation. Achievement 2: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation. Achievement 3: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation. Led a cross-functional initiative spanning multiple teams and time zones, coordinating engineering, design, and product stakeholders to deliver a high-availability platform serving millions of monthly active users while reducing infrastructure cost by a measurable margin and improving p95 latency across critical paths. Achievement 5: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation. Achievement 6: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation. Achievement 7: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.	2021-06 - Present San Francisco, CA
Staff Software Engineer Meridian Financial Technologies Achievement 1: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation. Achievement 2: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation. Achievement 3: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation. Led a cross-functional initiative spanning multiple teams and time zones, coordinating engineering, design, and product stakeholders to deliver a high-availability platform serving millions of monthly active users while reducing infrastructure cost by a measurable margin and improving p95 latency across critical paths. Achievement 5: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.	2019-01 - 2021-05 New York, NY

- Achievement 6: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.

Senior Full-Stack Engineer

2016-08 - 2018-12

Nimbus Analytics

Remote

- Achievement 1: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 2: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 3: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Led a cross-functional initiative spanning multiple teams and time zones, coordinating engineering, design, and product stakeholders to deliver a high-availability platform serving millions of monthly active users while reducing infrastructure cost by a measurable margin and improving p95 latency across critical paths.
- Achievement 5: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 6: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.

Software Engineer II

2014-03 - 2016-07

BrightPath Software Solutions and Consulting Group International

Austin, TX

- Achievement 1: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 2: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 3: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Led a cross-functional initiative spanning multiple teams and time zones, coordinating engineering, design, and product stakeholders to deliver a high-availability platform serving millions of monthly active users while reducing infrastructure cost by a measurable margin and improving p95 latency across critical paths.
- Achievement 5: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.

Founding Engineer

2012-09 - 2014-02

StartupForge

Palo Alto, CA

- Achievement 1: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 2: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 3: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Led a cross-functional initiative spanning multiple teams and time zones, coordinating engineering, design, and product stakeholders to deliver a high-availability platform serving millions of monthly active users while reducing infrastructure cost by a measurable margin and improving p95 latency across critical paths.
- Achievement 5: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.

Junior Developer (no achievements listed)

2011-06 - 2012-08

Legacy Systems Inc.

Boston, MA

Engineering Intern

2010-06 - 2010-09

Internship Co.

Seattle, WA

- Achievement 1: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 2: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 3: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Led a cross-functional initiative spanning multiple teams and time zones, coordinating engineering, design,

and product stakeholders to deliver a high-availability platform serving millions of monthly active users while reducing infrastructure cost by a measurable margin and improving p95 latency across critical paths.

SELECTED PROJECTS

Open-Source Distributed Job Scheduler

<https://github.com/alexandra-mw/distributed-scheduler>

<https://github.com/alexandra-mw/distributed-scheduler>

- Achievement 1: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 2: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 3: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Led a cross-functional initiative spanning multiple teams and time zones, coordinating engineering, design, and product stakeholders to deliver a high-availability platform serving millions of monthly active users while reducing infrastructure cost by a measurable margin and improving p95 latency across critical paths.

Real-Time Collaborative Document Engine with CRDT Conflict Resolution

<https://crdt-docs.example.com>

- Achievement 1: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 2: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 3: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.

Project Without Any Description (edge case)

<https://no-description.example.com>

Personal Site Generator

<https://github.com/alexandra-mw/site-gen>

- A small static-site generator written in Go with incremental builds and a plugin system.

EDUCATION

- **Massachusetts Institute of Technology** 2009 - 2011
Master of Science in Computer Science and Artificial Intelligence Cambridge, MA
 - Thesis on fault-tolerant consensus in geo-distributed databases
 - Graduate Teaching Assistant for Distributed Systems
 - GPA 3.9 / 4.0
- **University of California, Berkeley** 2005 - 2009
Bachelor of Science in Electrical Engineering and Computer Science Berkeley, CA
 - Graduated summa cum laude
 - President of the ACM student chapter
- **Online Continuing Education (no highlights)** 2020 - 2020
Professional Certificate in Machine Learning

CERTIFICATIONS AND AWARDS

- AWS Certified Solutions Architect - Professional
- Google Cloud Professional Cloud Architect
- Certified Kubernetes Administrator (CKA)
- Certified Kubernetes Application Developer (CKAD)
- HashiCorp Certified: Terraform Associate
- Microsoft Certified: Azure Solutions Architect Expert
- Distinguished Engineering Award, 2023
- Hackathon Grand Prize Winner, Global Cloud Summit, 2022

SPEAKING AND PUBLICATIONS

- Keynote: Designing Resilient Systems at Planet Scale - Global Cloud Summit 2023.
- Conference talk: The Pragmatic Path to Microservices - QCon San Francisco 2022.
- Co-author of a widely cited paper on consensus protocols in geo-distributed databases.
- Regular contributor to several popular open-source infrastructure projects.
- Led a cross-functional initiative spanning multiple teams and time zones, coordinating engineering, design, and product stakeholders to deliver a high-availability platform serving millions of monthly active users while reducing infrastructure cost by a measurable margin and improving p95 latency across critical paths.

LANGUAGES

- English (Native)
- Spanish (Fluent)
- French (Professional)
- German (Conversational)
- Mandarin (Basic)
