

# Alexandra Catherine Montgomery-Whitfield

alexandra.montgomery.whitfield@verylongexampledomainname.engineering | +1 (555) 987-6543 | San Francisco Bay Area, California, United States

Principal software engineer and engineering leader with 12+ years of experience architecting distributed systems, leading large teams, and shipping consumer and enterprise products at scale. Deep expertise across frontend, backend, infrastructure, and platform engineering. A pragmatic technologist who pairs long-term architectural vision with relentless execution. Reachable at <https://averylongportfoliourlthatdoesnotbreaknicely.example.com/portfolio/work/2024> for a full case-study archive.

## TECHNICAL SKILLS

- Languages:** TypeScript, JavaScript, Python, Go, Rust, Java, Kotlin, Ruby, C++, SQL
- Frontend:** React, Next.js, Vue, Svelte, Tailwind CSS, Redux, React Query, Webpack, Vite, Storybook
- Backend:** Node.js, Express, NestJS, GraphQL, gRPC, PostgreSQL, MongoDB, Redis, Kafka, RabbitMQ
- Cloud & DevOps:** AWS, GCP, Azure, Docker, Kubernetes, Terraform, Pulumi, GitHub Actions, Prometheus, Grafana
- Practices:** Distributed Systems Architecture and Design, Event-Driven Microservices, Domain-Driven Design, Observability, Site Reliability Engineering
- Leadership:** Team Building, Mentorship, Technical Strategy, Cross-functional Collaboration, Hiring & Interviewing

## PROFESSIONAL EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                        |

- Achievement 3: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Led a cross-functional initiative spanning multiple teams and time zones, coordinating engineering, design, and product stakeholders to deliver a high-availability platform serving millions of monthly active users while reducing infrastructure cost by a measurable margin and improving p95 latency across critical paths.
- Achievement 5: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 6: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.

## Software Engineer II

2014-03 - 2016-07

### BrightPath Software Solutions and Consulting Group International

Austin, TX

- Achievement 1: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 2: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 3: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Led a cross-functional initiative spanning multiple teams and time zones, coordinating engineering, design, and product stakeholders to deliver a high-availability platform serving millions of monthly active users while reducing infrastructure cost by a measurable margin and improving p95 latency across critical paths.
- Achievement 5: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.

## Founding Engineer

2012-09 - 2014-02

### StartupForge

Palo Alto, CA

- Achievement 1: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 2: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 3: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Led a cross-functional initiative spanning multiple teams and time zones, coordinating engineering, design, and product stakeholders to deliver a high-availability platform serving millions of monthly active users while reducing infrastructure cost by a measurable margin and improving p95 latency across critical paths.
- Achievement 5: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.

## Junior Developer (no achievements listed)

2011-06 - 2012-08

### Legacy Systems Inc.

Boston, MA

## Engineering Intern

2010-06 - 2010-09

### Internship Co.

Seattle, WA

- Achievement 1: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 2: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 3: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Led a cross-functional initiative spanning multiple teams and time zones, coordinating engineering, design, and product stakeholders to deliver a high-availability platform serving millions of monthly active users while reducing infrastructure cost by a measurable margin and improving p95 latency across critical paths.

## SELECTED PROJECTS

### Open-Source Distributed Job Scheduler

<https://github.com/alexandra-mw/distributed-scheduler>

<https://github.com/alexandra-mw/distributed-scheduler>

- Achievement 1: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 2: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 3: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.

adopted across the wider organisation.

- Led a cross-functional initiative spanning multiple teams and time zones, coordinating engineering, design, and product stakeholders to deliver a high-availability platform serving millions of monthly active users while reducing infrastructure cost by a measurable margin and improving p95 latency across critical paths.

### Real-Time Collaborative Document Engine with CRDT Conflict Resolution

<https://crdt-docs.example.com>

- Achievement 1: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 2: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.
- Achievement 3: shipped, measured, and iterated on a meaningful improvement that moved a key business metric and was adopted across the wider organisation.

### Project Without Any Description (edge case)

<https://no-description.example.com>

### Personal Site Generator

<https://github.com/alexandra-mw/site-gen>

- A small static-site generator written in Go with incremental builds and a plugin system.

## EDUCATION

---

### Massachusetts Institute of Technology

2009 - 2011

#### Master of Science in Computer Science and Artificial Intelligence

Cambridge, MA

- Thesis on fault-tolerant consensus in geo-distributed databases
- Graduate Teaching Assistant for Distributed Systems
- GPA 3.9 / 4.0

### University of California, Berkeley

2005 - 2009

#### Bachelor of Science in Electrical Engineering and Computer Science

Berkeley, CA

- Graduated summa cum laude
- President of the ACM student chapter

### Online Continuing Education (no highlights)

2020 - 2020

#### Professional Certificate in Machine Learning

## CERTIFICATIONS & AWARDS

- 
- AWS Certified Solutions Architect - Professional
  - Google Cloud Professional Cloud Architect
  - Certified Kubernetes Administrator (CKA)
  - Certified Kubernetes Application Developer (CKAD)
  - HashiCorp Certified: Terraform Associate
  - Microsoft Certified: Azure Solutions Architect Expert
  - Distinguished Engineering Award, Hyperscale Cloud Infrastructure Corporation, 2023
  - Hackathon Grand Prize Winner, Global Cloud Summit, 2022

## SPEAKING & PUBLICATIONS

- 
- Keynote: 'Designing Resilient Systems at Planet Scale' - Global Cloud Summit 2023.
  - Conference talk: 'The Pragmatic Path to Microservices' - QCon San Francisco 2022.
  - Co-author of a widely cited paper on consensus protocols in geo-distributed databases.
  - Regular contributor to several popular open-source infrastructure projects.
  - Led a cross-functional initiative spanning multiple teams and time zones, coordinating engineering, design, and product stakeholders to deliver a high-availability platform serving millions of monthly active users while reducing infrastructure cost by a measurable margin and improving p95 latency across critical paths.

## LANGUAGES

- 
- English (Native)
  - Spanish (Fluent)
  - French (Professional)
  - German (Conversational)
  - Mandarin (Basic)
